

# Distributive Property

6<sup>th</sup> Grade  
Mr. Wong

What is the  
Distributive  
Property?

Is when you multiply  
the number outside of  
the parenthesis to the  
numbers or variables  
inside the parenthesis.

$$5(2 + x)$$
$$5(2) + 5(x)$$
$$10 + 5x$$

# Example 1

Write each product using the Distributive Property. Then simplify.

$$9(31)$$

$$9(30 + 1)$$

*Rewrite 31 as a Sum*

$$(9 \cdot 30) + (9 \cdot 1)$$

*Distributive Property*

$$270 + 9$$

*Multiply*

$$279$$

*Add.*

# Example 2

Write each product using the Distributive Property. Then simplify.

$$8(59)$$

$$8(60 - 1)$$

*Rewrite 59 as a Difference*

$$(8 \cdot 60) - (8 \cdot 1)$$

*Distributive Property*

$$480 - 8$$

*Multiply*

$$472$$

*Subtract*

# Example 3: $2(10 + 3) = 2(13)$

distribute

$$2(10 + 3)$$

$$2(10) + 2(3)$$

$$20 + 6$$

$$26$$

# Example 4: $3(20 + 4) = 3(24)$

distribute

$$\begin{array}{c} \overline{\phantom{3(20 + 4)}} \\ \downarrow \phantom{3(20 + 4)} \phantom{3(20 + 4)} \\ 3(20 + 4) \end{array}$$

$$3(20) + 3(4)$$

$$60 + 12$$

$$72$$
